# Web Server For Mac Os X

Download Apache Web Server For Mac Os X Web Server Mac Os X Mojave OS X has a built in web server.. When OS X 10.8 was released, Apple had removed the convenient “Web sharing” switch in the Sharing options of System Preferences.. One installed (takes a quick double-click) you will have a new panel in your System Preferences which provides some very basic info about your Local Apache sites, and an easy way to turn the Apache server ON and OFF.. Here’s a couple of ways to start and stop your local Apache server: 1. With a GUI There is a free Preference Panel available at [Click On Tyler](#).. For some users, especially web developers, it may come in rather handy. You can use it for locally hosting web sites (typically for development purposes), for running a local WebDAV server (which may, for instance, come in handy for local syncing of apps like OmniFocus).. Notes it has some of what you asked for in a much easier to manage system. As to your web server, simple won't do if you manage many sites.
